Number of pockets	12
Maximum shaft diameter	5" (12.7 cm)

The Vermeer chip drum offers customers versatility and consistency, allowing them to use one grinder to process both wood waste and biomass. Designed for use on the Tier 4i (Stage IIIB) HG4000 horizontal grinder, the chip drum changes the action of the drum from ripping and shredding to chipping - offering the flexibility to produce a more uniform chipped end product.

When equipped with the chip drum, the machine is capable of producing consistent sized end product. Sizing can also be altered by changing screens or adjusting infeed settings.

Equipment shown is for illustrative purposes only and may display optional accessories or components. Please contact your local Vermeer dealer for more information on machine specifications.
